SUMMARY

Results-driven Computer Engineering graduate with a strong foundation in building production grade web applications and enterprise solutions. Proven expertise in architecting real time systems and migrating legacy workflows to modern tech stacks like Go, NestJS, React and NextJS. Published researcher in Cloud Workload Prediction with a deep interest in optimizing system reliability and automation through CI/CD and Docker.

SKILLS

Programming Languages

- TypeScript, JavaScript, Python, Java, C++, Go

Frontend Development

- React.js, Next.js, React Native, TailwindCSS, Zustand, Vite, Redux, Shadcn UI, Angular

Backend Development

- Node.js, NestJS, Express.js, Socket Io, Jest, Vitest, JWT, OAuth 2.0, ASP.NET

Databases and Cloud

- PostgreSQL, MongoDB, MySQL, SQLite, Redis, Type ORM, Prisma ORM

DevOps & Automation

- Docker, Docker Hub, Azure AD, Kubernetes, Nginx, GitHub Actions, CI/CD Pipeline

Tools & Methodologies

- Git, GitHub, Jira, Agile, Postman, Copilot, Antigravity, Cursor, Minikube

Specialized Knowledge

- Machine Learning, AI

EXPERIENCE

Software Engineering Intern

Mar 2025 - Sep 2025

Sri Lanka Telecom (SLT)

Colombo, Sri Lanka

- Led the migration of a PHP-based workflow to a React/Redux and NestJS architecture, implementing role-based access control and comprehensive features lacking in the previous system.
- Eliminated manual delays by integrating Socket.io for instantaneous ticket assignments and updates, while securing enterprise access via Azure AD Single Sign-On (SSO).

Freelancing

Oct 2025 - Dec 2025

- HR Management system – Full stack system using React and Nodejs to centralize employee records and automate payroll calculation and leave management to reduce administrative overhead.

Software Engineering Intern

Dec 2025 - Mar 2026

Lead Innovationz

Horana, Sri Lanka

- myParcel - Reduced operational costs associated with Google Maps API by migrating the mapping infrastructure to OpenStreetMap with a Google Tiles interface using .NET and Angular.
- LI Board System - Implemented a robust data protection strategy for databases by implementing a Cron-based automated and manual backups feature for the LI Board System using Node.js and React.
- Gamage Latex – Developed a full stack rubber management system using Go and React.

EDUCATION

University of Jaffna

Apr 2021 - Nov 2025

Bachelor of the Science of Engineering (BSc Eng) in Computer Engineering

PUBLICATIONS

Workload Prediction in Cloud Environment: Study of Temporal Convolutional Networks and Hybrid Deep Learning Models

- 9th IEEE International Research Conference on Smart Computing and Systems Engineering (SCSE) — 2026.
- Presented a comparative analysis of TCN and Hybrid Deep Learning models for optimizing cloud resource management.
- Paper accepted and presented and currently in the process of publication in IEEE Xplore.

PROJECTS

Gamage Latex(ERP System)

- Engineered a full-stack Go/Gin and React ERP system to automate latex intake, billing and monthly settlements, replacing manual record-keeping with a transactional processing engine.
- Implemented secure S3-compatible storage (Cloudflare R2) using pre-signed URLs for direct asset uploads and integrated JWT for authentication.
- Key Technologies : Go (Gin), PostgreSQL, GORM, Cloudflare R2, TypeScript, React, Docker

Rove [DatingApp]

- Built a full-stack dating app ASP.NET Core 10 + Angular 20 with onboarding, profiles, member discovery, likes and mutual matches.
- Implemented secure auth using ASP.NET Identity, JWT, HttpOnly refresh cookies, role based access and centralized error handling and real time messaging and online presence with SignalR.
- Key Technologies : ASP.NET Core 10, C#, Angular 20, TypeScript, Entity Framework Core, SQL Server, ASP.NET Identity, JWT, SignalR, Cloudinary, TailwindCSS, DaisyUI, Docker Compose, CI/CD

TMdent

github.com/ItsME-TM/tmdenttmdent.vercel.app

- Developed a modern full-stack dental appointment platform using Next.js, PostgreSQL, and Prisma for type-safe database management.
- Integrated Clerk for secure authentication and implemented automated workflows using Nodemailer for email confirmations and Vapi for AI-driven voice interactions.
- Key Technologies : Next.js, React, PostgreSQL, Prisma, Clerk, TanStack Query, TailwindCSS, Nodemailer, Vapi

Ameliorate [Open Source Contribute]

github.com/amelioro/ameliorateameliorate.app

- Developed a TypeScript/Prisma cleanup script using raw SQL to identify and purge orphaned records, ensuring relational data consistency across complex graph nodes and edges.
- Developed a GitHub Action for automated weekly database cleanup with a manual override capability to ensure data integrity.
- Key Technologies : TypeScript, Prisma, SQL, GitHub Actions (CI/CD), Node.js

Beat Music

github.com/ItsME-TM/beats-musicbeats-music-nu.vercel.app

- Created a music platform using Next.js, TypeScript and TailwindCSS.
- Implemented secure client-side session management via Firebase Auth and developed Next.js API routes to proxy search and song metadata from JioSaavn and YouTube.
- Key Technologies : Next.js, TypeScript, TailwindCSS, Firebase Authentication

TMchat

github.com/ItsME-TM/TMchatchat-with-me-latest.onrender.com

- Developed a full-stack MERN application (Vite/React) featuring instant messaging via Socket.io, managed state with Zustand, and integrated Cloudinary for dynamic profile management.
- Implemented a secure JWT/HTTP-only cookie authentication system, incorporating Arcjet for bot protection and rate limiting, while ensuring responsive design with TailwindCSS.
- Key Technologies : Node, Express, MongoDB, Socket.io, JWT, Cloudinary, Arcjet, Nodemailer, React, Vite, TailwindCSS, DaisyUI
